The facility can process up to 1 million pounds of local milk per day into shelf-stable ESL milk and other liquid dairy products, many of which will be packaged in Tetra Pak cartons

Tetra Pak, a pioneer and world-leading food processing and packaging solutions company, is pleased to share that Suntado LLC, a contract manufacturer of dairy and other beverages, has opened a state-of-the-art facility in Burley, Idaho, USA.

With commercial readiness expected just in time for Dairy Month (June), the facility can process up to 1 million pounds of local milk per day into shelf-stable and ESL milk and other liquid dairy products, many of which will be packaged in Tetra Pak cartons. “Shelf-stable products are one of the most exciting ways Tetra Pak is helping to move the beverage industry forward,” said Seth Teply, president and CEO of Tetra Pak U.S. and Canada. “With a longer shelf life and no need to refrigerate until opened, shelf-stable dairy products support the transformation of food systems by increasing access to safe food and reducing food waste. We’re excited that Suntado chose to work with us to create the innovative dairy and beverage facility of the future.”
