

## Terra Kai Organics' Júce gets Non-GMO verification

07 January 2019 | News | By Sonali Wankhade

**Despite Júce being certified organic and Non-GMO from the start, Terra Kai Organics felt the Project Verification was a necessary step in ensuring that all who enjoy Júce knew what they were buying**

Organic superfood and supplement company Terra Kai Organics is proud to announce that all varieties of its premier and best-selling product Júce are now Non-GMO Project Verified.

Designed to provide the fruits and vegetables the average American diet lacks, Júce REDS, Júce GREENS and Júce Super Fruit and Veggie Vitamin Blend are crafted with 35 or more different organic fruits and vegetables in addition to several superfoods in each serving.

The Non-GMO Project is North America's most trusted GMO (Genetically Modified Organism) avoidance label and is founded on ensuring people were conscious of what they put in their bodies.

Despite Júce being certified organic and Non-GMO from the start, Terra Kai Organics felt the Project Verification was a necessary step in ensuring that all who enjoy Júce knew what they were buying.

"Our mission has always been to simplify the benefits of organic juicing. Simplicity starts with our ingredients," said CEO and founder Adrian Vicente.

That simplicity, of course, doesn't end with Júce's ingredients. Because the organic fruits and vegetables are carefully air- and freeze-dried, the amazing superfood blends are not only easy to mix and serve but easy to store with a shelf life of two years.
