

Mineralife launches MG Labs Hemp Extract Oils

16 January 2019 | News | By Prapti Shah

The MG Labs Hemp Extract Oils are full spectrum hemp products with a complete array of flavonoids, terpenes and phytocannabinoids with 25mg of CBD per serving and 750mg per bottle.

Mineralife Nutraceuticals, a global manufacturer of health supplements, has entered the CBD market with the formation of MG Labs and release of two flavors of full spectrum Hemp Extract Oil - original and peppermint.

"For 13 years, Mineralife has been dedicated to providing HOPE in the form of quality ingredients and products that actually work. CBD is the next evolution in providing natural products to deliver on that promise and support overall health and wellness," said Neil Butterfield, Mineralife Founder and President.

"Everyday new CBD products enter a fairly juvenile market, many of which are being produced without the guidance of good manufacturing practices to ensure consistency and quality," states Neil Butterfield. "We've taken considerable steps to

develop two products that we can trace and guarantee from ground-to-bottle."

The MG Labs Hemp Extract Oils are full spectrum hemp products with a complete array of flavonoids, terpenes and phytocannabinoids with 25mg of CBD per serving and 750mg per bottle. Maintaining Mineralife's promise toward quality ingredients, MG Labs products are derived from organically grown, non genetically engineered Colorado hemp and third party tested for quality. The hemp extract oils are combined with MCT oil for easy digestion and increased absorption.

The original and peppermint flavor hemp extract oils are available in 30ml bottles, a 30 day supply.
