

AR Systems develops innovative Micro Store to sell fresh food

06 February 2019 | News | By Sonali Wankhade

Growers, restaurateurs, vending service companies, and entrepreneurs can use the FreshFirst Kiosk to sell farm-to-table foods directly to consumers in areas that are difficult to reach

AR Systems, a leading developer of automation retailing systems and controls, data collection services, wireless management tools, and technological solutions to everyday challenges, unveiled a revolutionary automated kiosk that gives consumers immediate access to a variety of farm-fresh salads and healthy produce.

Growers, restaurateurs, vending service companies, and entrepreneurs can use the FreshFirst Kiosk to sell farm-to-table foods directly to consumers in areas that are difficult to reach, such as offices and business parks, airports and transportation centers, colleges and universities, hotels and shopping malls.

The system puts clean and nutritious food within reach of millions of active consumers.

Glenn Panagakos, President at AR Systems, said that the new micro-store provides much more than just convenience.

The system also features AR Systems' patented ARS Kiosk Manager, which gives instant insight into system functions, sales reports, inventory levels, plus control of system parameters including service lock and unlock, perishable product detection, and even temperature control.

"At AR Systems, we strive to is to always be looking far out on to the horizon to see what we can invent today that will make an impact on the world tomorrow," Panagakos added.
