

Register Now - Free Webinar ENSURING QUALITY AT THE KITCHEN TABLE

14 March 2019 | Other | By BioSpectrum Bureau

Whether you grow, manufacture, supply, or distribute, the safety and quality of the products you deliver is vital to the world's food supply chain.

The STARLIMS Food and Beverage LIMS solution provides powerful and flexible tools to monitor processes, manage costs, and ensure regulatory compliance, so you can focus on delivering quality products that your customers deserve. From raw materials to the final product, the [STARLIMS solution](#) supports complete product tracking and traceability throughout the entire product lifecycle.

Register Now to a free webinar and See how LIMS mobile applications can improve your laboratory's workflow from our Industry Experts .

Learn more on below points

MANAGE AN EFFICIENT SAMPLE AND PRODUCT LIFECYCLE

- Automate routine food lab data analysis, sample lifecycle and complex calculations by eliminating the need for time-consuming manual data-entry and non-value added manual processes
- Configure triggers, sample points, re-sample and re-test workflows. Link to open investigations through the integrated investigation module
- Generate worksheet/list, result calculations and result specifications comparisons
- Manage protocols, sample inventory, studies, pulling schedules, conditions and locations for both manufacturing and

formulation stability studies

- Ensure that all scheduled samples are properly collected and tested with the environmental monitoring module and efficiently manage sample points using visual floor plans
- Create recipes and batches associated with recipes, and test them through standard QM workflows.
- Outsource tasks with third-party (internal or external) laboratories, including an entire lifecycle to allow the shipment of samples to third-party laboratories for testing
