Phenomenex Inc., a global leader in the research and manufacturing of advanced analytical technologies has published its updated product and services guide for the year 2014-15. The guide covers the company’s comprehensive lines of HPLC/UHPLC Columns, GC Columns, and sample preparation products.

The catalog also includes new offerings from the company - new Yarra analytical dimension and prep column and new Aeris Peptide 2.6µ column. The 412-page guide incorporates a Kinetex column selection guide, new excipient applications on Phenogel GPC columns and new chiral column comparisons. This year catalog also contains a sample request tool for solid phase extraction tubes, Verex certified vials, and Phenex syringe filters.

The new guide is available online or in a full-color print version. Online, the guide includes links to new corporate videos as well as Phenomenex’s range of web tools that enable customers to easily find applications, select columns and accessories, and access round-the-clock support. Multiple country-specific print versions have been published this year for the convenience of customers in key geographic areas, said the company.

“Our guide is extremely easy to use and full of useful products, technical tips and applications,” said Kari Kelly, corporate marketing manager for Phenomenex. “Its an excellent complement to our award-winning website and comprehensive collection of web tools and resources, which we are continually developing.”
