Herbalife Nutrition unveils botanical DNA field testing device and methods at the Summit

Herbalife Nutrition, a premier global nutrition company whose purpose is to make the world healthier and happier, recently hosted the 6th annual nutrition industry scientific summit, in Torrance, California, US.

At the summit, industry experts and those from academia shared information and new strategies on a broad range of nutrition-related topics, including developments in botanical identification, manufacturing quality control, the science of gut health, and the Food Safety Modernization Act.

Herbalife Nutrition quality control analytical scientist, Dr. Zhengfei Lu and Dr. Steven Newmaster, professor of Botany & Genomics at the University of Guelph, Canada, demonstrated a botanical DNA field-testing device and discussed methodologies that could help all manufacturers accurately identify botanicals.

Dr. David Heber, Chairman of the Herbalife Nutrition Institute and Founding Director of the Center for Human Nutrition at the University of California, Los Angeles, shared insights into the human microbiome, the new science behind its relationship with botanicals, and how a healthy microbiome directly links to people’s health and happiness.
