The multi-line plant is scheduled to begin production in mid-2021 and will create approximately 230 manufacturing jobs.

Ball Corporation recently announced its plan to build a new U.S. aluminum beverage packaging plant in Pittston, Pennsylvania. The multi-line plant is scheduled to begin production in mid-2021 and will create approximately 230 manufacturing jobs.

Ball plans to make an initial investment of more than $300 million in its Pittston facility over multiple years. The plant will supply customers with a portfolio of can sizes to serve the addressable market.

Ball chose Pittston for its new facility because of the existing infrastructure, proximity to main distribution routes, regional labor base, the cooperation of state and local officials during the site selection process and Pennsylvania’s focus on sustainable growth. Infinitely recyclable and economically valuable, Ball’s aluminum cans, bottles, and cups enable a truly circular economy in which materials can be and actually are used again and again. In fact, 75 percent of all aluminum ever produced is still in use today.

Ball Corporation supplies innovative, sustainable aluminum packaging solutions for beverage, personal care and household products customers, as well as aerospace and other technologies and services primarily for the U.S. government.
