Represents Tyson’s biggest investment in Tennessee and the single largest corporate investment ever in Gibson County

Tyson Foods opens the company’s new poultry complex in Tennessee, US. The $425 million project, which includes a processing plant, feed mill and hatchery, represents Tyson’s biggest investment in Tennessee and the single largest corporate investment ever in Gibson County.

Several hundred workers have been hired so far and are being trained for the start of production later this month. The processing plant, which is expected to employ more than 1,500 team members by 2023, is located within the Gibson County Industrial Park and will produce pre-packaged trays of fresh chicken for retail grocery stores nationwide beginning in late April.

The payroll and payments to farmers from the new operation, along with the purchase of grain and utilities, is expected to generate an annual economic benefit to the state of Tennessee of $150 million.

“We’re pleased to add to the growth in Gibson County with the opening of our new 370,000 square foot processing facility,” said Dean Banks, President and CEO, Tyson Foods. “We appreciate the support of all those who played a role in making this facility possible—the local community, county, state and our Humboldt team members, who safely and responsibly produce high-quality protein daily to help feed our nation and the world.”
