EC FLIP will reduce the time to set up the stove, clean up after the cooking process

Chennai-based startup Evochef is all set to enter the kitchen with state-of-the-art smart and unique offerings - this time launching a first-of-its-kind, EC FLIP, the world’s first smart dosa maker. The EC FLIP smart dosa maker has stormed the market and revolutionised the kitchen by ‘printing’ rectangular dosas - a huge change from the regular circular dosas.

Available in four vibrant colours, Golden Beige, Metallic Orange, Metallic Blue, and White, EVOCHEF appliances are manufactured in India and are based on the highest standards of European design and materials of premium quality.

The product is compatible with different types of batters ranging from plain dosas to rava, to bajra, and even oats dosa. An added feature of the product includes mixing the batter with finely chopped vegetables or adding different toppings to the batter like dal chili powder, cheese, mayonnaise, and even chocolate, making the product innovative as well as a healthy alternative to choose from.
