With natural ingredients and a mix of flavours, the products have been designed with consumers' well-being in mind, promoting a 360-degree healthy lifestyle

Ferrarelle Società Benefit partners with Sidel to install its first-ever aseptic line at the Boario plant to produce its product range of Vitasnella ‘Le Linfe’ functional water and teas. With natural ingredients and a mix of flavours, the products have been designed with consumers' well-being in mind, promoting a 360-degree healthy lifestyle.

Ferrarelle Società Benefit, one of the largest mineral water producers in Italy well-known for its unique naturally sparkling water properties, bottles “Boario”, “Vitasnella” and “Fonte Essenziale” mineral waters at its Boario plant. Close to the picturesque Iseo Lake, the plant sources its water from the mountains close to the factory. This strategic location allows Boario to produce uniquely bottled mineral water with health-enhancing properties.

Ferrarelle Società Benefit chose Sidel’s Aseptic Combi Predis technology to produce its new range of functional water and teas. Sidel supported the company in installing its aseptic technology to ensure a high-end taste experience, product integrity and a long shelf-life, utilising its Predis™ dry preform decontamination solution – a safe, hygienic, cost-effective way of packaging a variety of sensitive beverages.

By installing Sidel’s Aseptic Combi Predis to produce Vitasnella ‘Le Linfe’ product range, Boario’s line is capable of handling two different formats, 0.5 litres and 1.25 litres, and achieves 18,000 bottles per hour. This system ensures full production sterility, beverage integrity and food safety with easy operations.
