The company designed both Biotis DHA Flex Powders to help brands create best-in-class food, drinks and supplements that offer multifunctional health benefits

FrieslandCampina Ingredients launches Biotis® DHA Flex Powder range with two algae-based microencapsulated DHA powders.

Biotis® DHA FlexP 15 and Biotis® DHA FlexP 20 join the company’s brain health portfolio, enabling the creation of multifunctional vegan and vegetarian omega-3 products with superior sensory properties

The company launched 2 new DHA ingredients for the adult nutrition market. Biotis® DHA FlexP 15 and Biotis® DHA FlexP 20 are high-load, algae-based, microencapsulated DHA powders with superior sensory properties and are suitable for vegan and vegetarian formulations. With over 23 years of expertise in microencapsulation technology, the company designed both Biotis® DHA Flex Powders to help brands create best-in-class food, drinks and supplements that offer multifunctional health benefits, without compromising on consumers’ experience or dietary preferences.

Using FrieslandCampina Ingredients’ advanced technology, the plant-based DHA oil is encapsulated in a powder matrix with a high level of vitamin C, 4g per 100g, for additional immune health benefits. The process also protects the DHA from oxidation and ensures a superior sensory profile with no ‘fishy’ taste or odour.
