Already holding multifold patents across the US, UK and India, On2Cook has secured a patent for Frying Device' by Russia's Federal Service for Intellectual Property Rights

A cooking invention marvel in decades, the world's fastest cooking device On2Cook, has created a fresh landmark by securing two new international patents. The AI-integrated combination cooking device, which is already disrupting B2B kitchens in India and parts of the US, has now been granted patents in Russia under the Household Appliance category. Already holding multifold patents across the US, UK and India, On2Cook has secured a patent for Frying Device' by Russia's Federal Service for Intellectual Property Rights, which substantiated it as an "improved frying device". Strengthening its global market position with over 12 granted patents, On2Cook inventor Sanandan Sudhir stated that the revolutionary cooking device is expected to soon secure patents across many more countries around the world.

"While the deep fryer market is buzzing to cross the $1.2 billion mark by year-end, frying continues to be an extremely energy-intensive and time-consuming affair, especially for commercial kitchens like restaurants, cloud & community kitchens, QSR outlets etc. On2Cook's unprecedented combination of cooking technology is transforming the frying segment completely through substantial cost and time savings in frying. The latest Russian patent is yet another testimony of the culinary history being scripted by On2Cook, an AI-based combination cooking wonder. We are confident of soon securing several more international patents across diverse segments," said Sanandan Sudhir aka Sandy, Inventor & CEO, On2Cook on achieving the remarkable feat.
