This helps minimise PFAS contamination, protect public health, safeguard the environment, and prevent harmful leaching from products

SGS has unveiled the industry’s most extensive suite of per- and polyfluoroalkyl substances (PFAS) testing services for all industries. From consumer products and electronics to food and the environment, SGS offers tailored solutions to meet the specific needs of each sector.

Recognised as the undisputed industry leader in PFAS testing, SGS is the partner of choice for organisations looking to foster a positive impact on society and the environment. With the broadest scope of testing and accreditation, SGS brings global expertise, state-of-the-art laboratories and extensive knowledge in environmental and product analysis to identify and quantify PFAS accurately.

Its expert teams provide precise, reliable testing to support stakeholders in meeting regulatory requirements and demonstrating product safety. This helps minimise PFAS contamination, protect public health, safeguard the environment, and prevent harmful leaching from products.

Recently, SGS supported a pivotal New Jersey study on PFAS levels in water, soil and fish that contributed towards fish consumption advisories to protect at-risk consumers. It also investigated drinking water sources at multiple US military sites to ensure service personnel were protected from harmful PFAS.
