SIG’s plant in Gujarat will supply the company’s growing filler base serving leading dairy and non-carbonated soft drink producers in India

SIG, a leading aseptic packaging solutions provider, headquartered in Neuhausen, Switzerland, has announced that its first aseptic carton plant in India is now fully operational. The facility located in Ahmedabad, completed in just 20 months, started production in one of the world's most dynamic markets.

SIG's plant in Gujarat will supply the company's growing filler base serving leading dairy and non-carbonated soft drink producers in India. With its full operational capacity, it will also serve as an export hub for neighboring countries in Asia, supporting increased regional trade and contributing to foreign-exchange revenues and export tax benefits for the nation.

With production scaling up, the plant has the potential to create more than 300 employment opportunities in Gujarat and many more in ancillary services and supply chains. The facility is the tenth aseptic carton packaging plant in SIG's global production network, underscoring the company's long-term commitment to India and the broader Asia region.

"Bringing this facility into full operation is an important milestone for SIG and a strong reflection of our global strategy", said Christoph Wegener, Chief Markets Officer, SIG. "At SIG, technology is meaningful only when it creates real value across the entire ecosystem - for customers, partners, and the planet. This plant will strengthen our ability to serve a fast-growing region with intelligent, future-ready packaging systems that combine speed, performance, and flexibility. We remain committed to building partnerships, unlocking new possibilities for our customers, and supporting India's position as a rising hub for advanced food and beverage manufacturing."

Abdelghany Eladib, President & General Manager, India, Middle East and Africa, SIG said, "India is an important building block of our regional strategy - dynamic, ambitious, and filled with opportunity. With this world-class facility now running in full swing, we are able to support our customers with greater agility while creating meaningful employment and strengthening local value chains. The plant will not only meet India's growing demand but also contribute to the country's presence in regional dairy and beverage exports. This achievement reflects the dedication of our team and the strong partnerships that continue to drive SIG's progress across IMEA."

Vandana Tandan, Head of Market India and Bangladesh at SIG, added, “Seeing this plant fully operational is a moment of immense pride for all of us. The state-of-the-art facility strengthens our ability to serve India’s fast-evolving dairy and beverage sectors. The local operations allow us to respond to customer needs with greater speed, flexibility, and proximity - all essential in a market as dynamic as India. Over just seven years, SIG has built a strong and trusted presence here. Our commitment remains clear: to drive innovation, support job creation, and deliver sustainable, high-quality aseptic packaging solutions that meet the needs of consumers across India and neighboring regions.”
