A Make-in-India innovation taking mangoes into next-generation cognitive health solutions

Zeus Hygia Lifesciences, a science-led nutraceutical ingredient innovator, has launched STADICE, a proprietary, enriched mango extract designed to support cognitive performance, alertness, focus, and memory. Developed using Zeus Hygia's proprietary Insolib Technology, STADICE addresses the long-standing solubility and bioavailability challenges associated with conventional mango or mangiferin extracts. STADICE transforms mangiferin from a promising molecule into a practical, high performance cognitive ingredient.

"Cognitive fatigue, stress, and reduced attention are no longer niche concerns; they are everyday realities across age groups and professions," said Dr Arunkanth Krishnakumar, Co-founder and CEO, Zeus Hygia Lifesciences. "With STADICE, our focus was to unlock the true potential of mangiferin through science-led innovation. By improving its solubility and bioavailability, we've created an ingredient that delivers faster, more consistent cognitive benefits while remaining rooted in botanical science."
