The facility is expected to be operational by December 2026

Nutro Life Science, (Livo Universal Healthcare) has announced plans to establish what is poised to be the world's first fully robotic sports nutrition manufacturing facility in India. Currently under construction in Ludhiana on over one acre of land, the facility is expected to be operational by December 2026.

The upcoming Ludhiana plant represents a major advancement in India's nutraceutical manufacturing ecosystem. Designed with end-to-end robotics and automation across the production lifecycle, the facility will significantly reduce human intervention, ensuring higher consistency, improved hygiene standards, and near-zero manufacturing errors.

It specialises exclusively in sports nutrition and nutraceutical products tailored for athletes, fitness enthusiasts, and performance-focused consumers. Its portfolio includes whey protein, plant-based protein, mass gainers, pre-workouts, amino acid supplements, fat burners, hydration solutions, and ketogenic nutrition prooducts. All products are developed using high-quality raw materials and rigorously vetted suppliers to ensure consistency and trust across domestic and international markets.

With the launch of this advanced facility, the company has outlined a strong financial and strategic roadmap. By the end of FY 2027–28, it aims to achieve a valuation of Rs 500– Rs 600 crores. This growth will be driven by increased production capacity, expansion into international markets, stronger contract manufacturing partnerships, and enhanced operational efficiency through automation.
